

Details required for admin panel

Here is the standard information that should be required to set up an admin account:

1. Professional Identity

- **Full Legal Name:** For internal accountability and audit logs.
- **Corporate Email Address:** Admins should strictly use company-issued emails (e.g., `name@yourdomain.com`). Personal emails (Gmail, Yahoo) should be prohibited for admin access.
- **Job Title / Department:** To justify why they need admin access and to easily identify their function (e.g., "Compliance Officer" or "Lead Developer").

2. Strict Authentication & Security

- **Mobile Phone Number:** Essential for setting up mandatory Multi-Factor Authentication (MFA) via SMS or an authenticator app.
- **Strong Password Setup:** System-enforced complex password requirements upon their first login.
- **Hardware Key (Optional but Recommended):** High-security platforms often require a YubiKey or similar hardware token for super-admins.

3. Role & Permission Assignment

Unlike regular users, admins shouldn't have a "one-size-fits-all" dashboard. The system must require a **Role** to be assigned during creation.

- *Examples:* Super Admin (full access), Compliance Admin (can view KYC docs but not change platform code), or Support Admin (can reset user passwords but not view financial routing numbers).

4. Background System Tracking (Invisible to the Admin)

The system itself should log the following when an admin account is created:

- **Creator ID:** Which existing Super Admin authorized and created this new admin account.
- **Timestamp & IP Address:** Exactly when and from where the account was provisioned

Entity

If you are selecting **"Entity"** (Company / Fund / Trust), the requirements shift from verifying a person (KYC) to verifying a business (KYB - Know Your Business).

It is worth noting that a core platform **admin** is almost always an *Individual* (a specific employee). An **Entity** account is typically used when a corporation, venture fund, or trust wants to invest or act on the platform as a business.

If you are setting up the requirements for an **Entity** to register, here is the standard information you should require:

1. Basic Company Information

- **Legal Entity Name:** The exact registered name of the business.
- **Entity Type:** e.g., LLC, Corporation, Trust, Partnership, or Venture Fund.
- **Registration / Incorporation Number:** The official ID assigned by the government.
- **Tax Identification Number:** Such as an EIN in the US.
- **Date of Incorporation:** When the company was officially formed.
- **Country and State/Province of Incorporation:** Where the business is legally registered.

2. Business Contact & Location

- **Registered Business Address:** The official legal address.
- **Operating Address:** Where the business actually operates (if different).
- **Corporate Website:** (Optional but helpful for verification).

3. Authorized Representative (The human managing the account)

Even though the account belongs to a company, a real person has to log in and manage it. You will need their:

- **Full Legal Name**
- **Corporate Email Address**
- **Role/Title:** e.g., CEO, Managing Partner, Trustee.
- **Proof of Authorization:** A document proving this person has the legal right to open an account and invest on behalf of the company.

4. Required Documentation (Document Uploads)

Instead of a selfie and passport, an entity must upload corporate documents:

- **Certificate of Incorporation / Registration:** Proof the business exists.
- **Articles of Organization / Memorandum of Association:** To understand the structure.

- **Beneficial Ownership Register:** A document identifying anyone who owns 25% or more of the company (crucial for anti-money laundering compliance).
