EDUCATION

St. Thomas' College of Engineering and Technology

Bachelor of Technology in Electronics and Communication Engineering — 2021 - 2026 | CGPA: 7.04

Future Campus School

All India Senior School Certificate Examination (Class 12) — 2020 - 2021 | Percentage: 67.5%

St. Stephen's School

All India Secondary School Examination (Class 10) — 2018 - 2019 | Percentage: 72%

TECHNICAL SKILLS

Backend Development: Java, Spring Boot, Spring MVC, RESTful APIs, Microservices, Hibernate/JPA, Maven, Authentication & Authorization

Frontend Development: React.JS, JavaScript (ES6+), HTML5, CSS3, Responsive Design, Component Architecture, REST API Integration

Databases: MySQL, MongoDB, PostgreSQL, Database Design, Query Optimization, JPA/Hibernate ORM, Data Modeling

Languages: Java, JavaScript, Python

Tools & Technologies: Git, GitHub, Postman, Docker, Maven, IntelliJ IDEA, VS Code, Agile/Scrum

EXPERIENCE

Pitchmatter

Full Stack Developer (In Progress) | March 2026

- Developed end-to-end enterprise applications with React.JS frontend and Java Spring Boot backend ensuring seamless integration and scalable architecture
- Built responsive user interfaces from Figma designs while architecting RESTful APIs using Spring MVC with proper JWT-based authentication and role-based authorization
- Optimized full stack performance through code splitting, lazy loading, database query optimization with JPA/Hibernate, and efficient state management in React
- Conducted comprehensive technical audits across frontend and backend identifying performance bottlenecks, security vulnerabilities, and implementing best practices for enterprise applications

PROJECTS

Task Management System

React.JS, Java Spring Boot, Spring Security, MySQL, JWT Authentication, Hibernate

- Built full stack enterprise task management application with responsive React.JS frontend and Spring Boot RESTful API backend using MVC architecture
- Implemented secure authentication system with JWT tokens and Spring Security, managing user sessions with role-based access control across frontend and backend
- Designed relational database schema in MySQL with user-specific data isolation using Hibernate ORM for efficient data persistence and retrieval
- Created intuitive UI with component-driven architecture while handling CRUD operations through optimized RESTful API endpoints with proper exception handling

Movie Browsing Platform

React.JS, Java Spring Boot, REST APIs, External API Integration, Responsive Design

- Developed dynamic movie browsing platform integrating third-party REST API with React.JS frontend and Spring Boot middleware supporting 500+ paginated results
- Implemented client-side state management for persistent favorites with optimized API call handling and caching strategies to reduce backend load
- Built responsive component-based architecture with multi-screen navigation and efficient data fetching patterns using React hooks
- Engineered comprehensive error handling, loading states, and data transformation for seamless user experience across the application
